key insights & recommendations

The analysis highlights that not all customers respond equally to marketing campaigns , And subscription rates vary across different groups of factors, Such as education level, marital status, age, and financial position which contribute to this differences. understanding this patterns allow the bank to focus on high potential customers and allocate resources more efficiently

- Only 11.5% of customers subscribed
- Customers with higher education respond better
- Middle aged ,married ,and financially stable customers are more likely to subscribe
- Job type affect subscription- management and self employed respond more
- Focus campaigns on high potential group for better results.
